No. is the number of results predicted by chance to h
score greater than or equal to the score of the result bein
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sued Patents_NA:*

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Droscopial Genome Project (BDGP).
The BDGP is constructing a physical map of the Droscophila melanogaster genome using these BACs. For further information please see http://www.fruiffly.org The BDGP Droscophila melanogaster BAC library was prepared by Kazutcyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Drosophila melanogaster (fruit fly)

Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2, on bw sp, the same strain used for the BDGP from the and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila genome Project (BDCP). The BDCP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see thtp://www.fruitfly.org The BDCP Drosophila melanogaster BAC library was prepared by Kazucoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDCP from the isogenic strain y2; cn bw sp, the same strain used for the BDCP's Pl and EST library is nore detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                          Ŋ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RRWGDDTWDRDTRKDDWDWTKWWTWWKDRADDRRWAGDADRWAWDDGAGTWWTATWWWW 1039
